

What is Nature Led Community Resilience?

Nature-led Community Resilience (NLCR) is an approach to emergency management that benefits both people and nature through disasters. NCLR is founded on the reciprocal relationship between people and nature. When people connect with and support nature's recovery, they are supported in their own recovery with renewed hope for the future.

NLCR involves people healing nature and nature healing people.

Disasters are becoming more frequent; every option to support preparedness and community recovery after disasters is important.

Benefits of NLCR in emergency management

- Complements existing recovery actions
- Evidence-based & best practice informed (including state/national/ global frameworks)
- Co-designed & empowers communities
- Supports lasting change and adaptation practices
- A trauma-informed approach that supports the five elements of psychological safety

Generates a sense of safety

Promotes calm

Enables connection with others and the environment

Supports agency through self and collective efficacy

Instills hope

How to implement NLCR

Before

During

After

Stage 3: Plan Community, culture and biodiversity recovery plans drafted. Submitting grant applications for NLCR funding. Stage 4: Partner Plans socialised and Eol to participate in grants and resources. Sector wide collaboration. Stage 5: Implement Ongoing promotion, swide range of NCLR activities. Stage 6: Evaluate and Learn Engage with existing monitoring tools and community surveys and engagement.

Example of implementation in Victoria

After the Black Saturday bushfires, the Marysville (VIC) community connected with the nationally Endangered local Barred Galaxias fish, being rescued as part of biodiversity recovery efforts. These fish were taken into captivity while their waterways recovered. The return of the fish to local waterways coincided with the human community's healing and return to their homes.

The community saw hope and strength in supporting nature's recovery from the bushfires:

"The fish are back and so are we!"

Since then, NLCR has been incorporated into emegency recovery across Victoria. Recent bushfires and floods in Victoria have demonstrated real examples of the psychosocical benefits of NLCR activities for the community by strengthening connections with nature.

The 'new before'

With worsening disasters, a changing climate, and increasing competition for resources, every action to support community reslience and recovery is essential.

By embedding the principles of NLCR and nature connection more broadly, communities will be more resilient and recover more readily when faced with disaster.
